

Safe for Baby Worksheet:

Babies get into all sorts of stuff, and put just about everything in their mouth. They are also too little to know what's dangerous. This is why it's important for all older kids to know what babies should or shouldn't have.

Instructions: Cut out the different items below and then paste them on the second page: On the floor with baby if you think it's something safe for them to have, or up high locked away if you think the item could be dangerous. Be prepared to talk with your parents or teachers about why each item is safe or dangerous.

Some hints: Look for things that are...

- A) Small enough to eat it or choke on it
- B) Something sharp they can hurt themselves with
- C) Something plastic they could suffocate inside

Name: _____
