If you can hear thunder, that means lightning is close enough to strike you. Count the number of seconds after a lightening flash until you hear the thunder. It takes 5 seconds for the sound to travel one mile. That means if you count to 5 and hear thunder, the lightning is one mile away. There's only one safe place to be in a lightning storm: Inside. Go inside a car or house. If you're out in the open, kneel down someplace sheltered, but not right next to a tree! If lightening hits it, it will hit you too.
