## Drowning Missing Word Safety Worksheet

These words are lost! Help them find their proper place in the text below.

bottom      gasping      head      water      watchful  
notice      quickly      shout

When people drown, they don't make a lot of noise. They're so busy trying to breathe in a breath that they can't \_\_\_\_\_ out for help. You might hear a \_\_\_\_\_ sound, but not much else. They also might splash around a little, but this will be difficult to \_\_\_\_\_ in a busy pool. This is why it's important for kids like you to keep an eye out for those around them and let an adult know if you think someone is in trouble.

Here is what it might look like if someone is drowning:

- A) Someone is at the \_\_\_\_\_ of the pool and isn't coming up.
- B) Someone is floating face down or has their \_\_\_\_\_ underwater but isn't swimming.
- C) Someone is slapping at the surface or trying to keep their head above water.

If you notice any of these things, call for help right away. People can be saved with CPR if help gets to them \_\_\_\_\_. So keep a \_\_\_\_\_ eye ... you just might save the day!
